Data Flow Diagrams:

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

Example: [\(Simplified\)](#)

Flow

1. User configures credentials for the Watson Natural Language Understanding service and starts the app.
2. User selects data file to process and load.
3. Apache Tika extracts text from the data file.
4. Extracted text is passed to Watson NLU for enrichment.
5. Enriched data is visualized in the UI using the D3.js library.

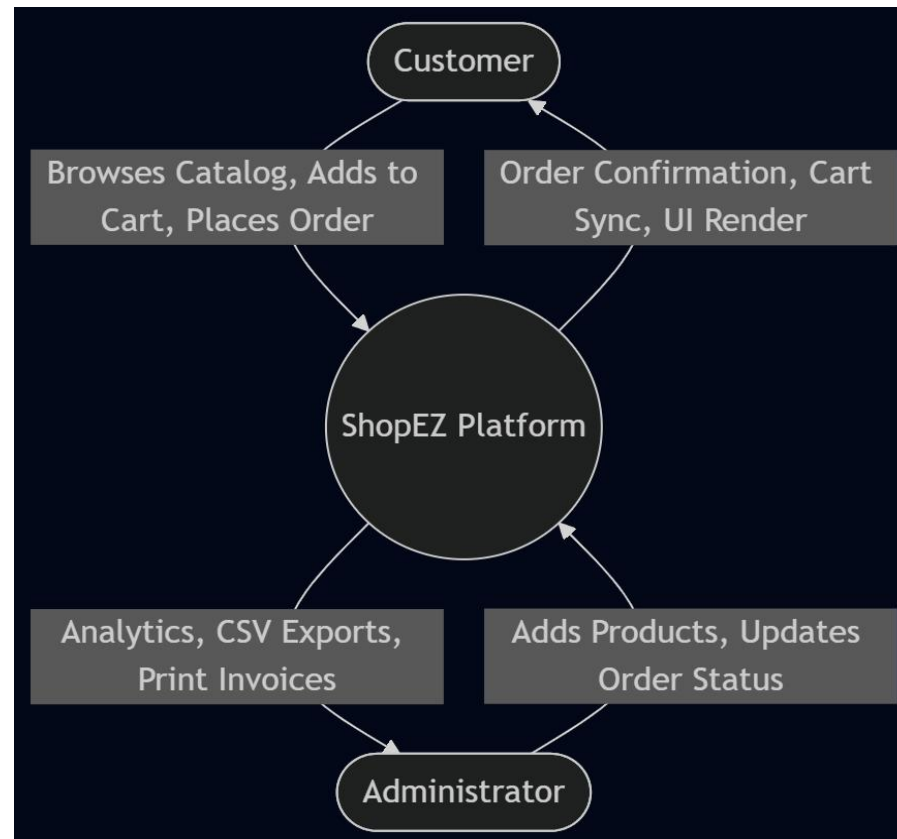

User Stories

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Customer (Mobile user)	Registration	USN-1	As a user, I can register for the application by entering my email, password, and confirming my password.	I can access my account / dashboard	High	Sprint-1
		USN-2	As a user, I will receive confirmation email once I have registered for the application	I can receive confirmation email & click confirm	High	Sprint-1
		USN-3	As a user, I can register for the application through Facebook	I can register & access the dashboard with Facebook Login	Low	Sprint-2
		USN-4	As a user, I can register for the application through Gmail	I can authenticate via Google OAuth and access dashboard	Medium	Sprint-1
	Login	USN-5	As a user, I can log into the application by entering email & password	I can access protected routes after receiving a valid JWT	High	Sprint-1
	Dashboard	USN-6	As a mobile user, I want a responsive, fast-loading storefront so I can browse on cellular networks.	UI scales perfectly to mobile widths via Tailwind and loads quickly.	High	Sprint-1
Customer (Web user)	Cart & Checkout	USN-7	As a web user, I want my shopping cart to persist when I close my browser so I don't lose my items.	Cart data is successfully retrieved from LocalStorage on page load.	High	Sprint-1
	Product Browsing	USN-8	As a web user, I want to see size selectors only for fashion items so the interface is uncluttered.	Size grid is hidden for Electronics and Home Decor categories.	Medium	Sprint-1
Customer Care Executive	Order Support	USN-9	As a customer care executive, I want to look up order statuses using a customer's email address to assist them.	Search bar retrieves order history based on user email input.	Medium	Sprint-2
	Order Support	USN-10	As a customer care executive, I want to update an order's shipping status so the customer gets accurate tracking.	Status dropdown successfully updates DB state (e.g., to "Shipped").	High	Sprint-2
Administrator	Admin Cockpit	USN-11	As an admin, I want to view a dashboard with total revenue and order counts to track daily performance.	Real-time widgets display aggregated metrics from MongoDB.	High	Sprint-2

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
	Catalog Management	USN-12	As an admin, I want to add products without filling out size matrices for non-apparel items to save time.	Admin form dynamically hides sizing arrays for "Electronics".	High	Sprint-2
	Reporting	USN-13	As an admin, I want to print physical invoices devoid of UI elements for my accounting records.	@media print CSS successfully isolates the receipt layout.	Medium	Sprint-2
